

Lucy Carpenter (Faculty Fellow) continues her research studying the long-term health of nearly 20,000 members of the armed forces who took part in chemical warfare agent trials in the UK at Porton Down between the 1940s and the 1980s. Analyses comparing their rates of death, and cancer diagnoses, with those of 20,000 similar members of the armed forces who did not take part in these trials are now nearing completion. She also continues to maintain involvement in epidemiological research in the areas of infectious diseases and cancer in sub-Saharan Africa.
